

FIND THOSE LEAKS AND FIX THEM...

EVERY DROP COUNTS!

Leaky toilets, faucets, showers and pipes can account for 10% of your water bill.
Save water and money by fixing household leaks.

Toilets the most common source of a leak!

A leaky toilet tank can waste 60 gallons a day / 22,000 gallons a year.

How to check.... You can pick up some tablets at the Water Department
Place them in your toilet tank if color appears in the bowl within an hour you probably
have a leak. (You also can use food coloring if you do not have tablets)

Faucets/Shower heads

A trickling faucet can waste 19 gallons a day/7000 gallons of water a year.

Whether a slow drip or steady trickle you're wasting a lot of water.
(A new washer may stop these leaks and will only take a few minutes to install)

Water Pipes

Check for wet areas around your water pipes in your basement, underneath sinks and
behind your washing machine. Joints are especially susceptible to leaks.

A Simple Test for Leaks

Read your meter then be sure **NOBODY USES ANY WATER**. In 30 minutes check
your meter again. If the meter reading has changes there is probably a leak.
