

## IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

*This report contains important information about your drinking water. Please translate it or speak with someone who understands it or ask the contact listed below for a translation.*

### Webster Water Department located in Webster, Massachusetts has levels of PFAS6 above the Drinking Water Standard

#### What happened?

Our water system received notification of PFAS6 results showing that **our system violated the 20 nanograms per liter (ng/L) PFAS6 Maximum Contaminant Level (MCL) drinking water standard at the Bigelow Road Well during the following quarterly compliance periods in 2021 and 2022**. This well was previously removed from service on September 15, 2021, however it was necessary to return it to service between May 15, 2022 and August 10, 2022 to allow repair of a mechanical issue at our main water treatment facility. Once the repairs were completed, the well was again removed from service and will remain in stand-by mode for emergencies only.

Location: Well 3 Bigelow Road Well				
Compliance Period	Date Collected	PFAS6 Result (ng/L)	PFAS6 Quarterly Average (ng/L)	PFAS6 MCL (ng/L)
July – September 2021	7/30/2021	20.4	22	20
	8/25/2021	24.2		
	off-line	-----		
Well off-line September 15, 2021 to May 15, 2022				
April – June 2022	off-line	-----	15	20
	5/16/2022	10.3		
	6/16/2022	20		
July – September 2022	7/21/2022	26.1	28	20
	8/5/2022	30.3		
	off-line	-----		
Well off-line August 10, 2022				

Compliance with the PFAS6 MCL is calculated as a quarterly average based upon the total number of samples collected during the compliance period. The location where elevated levels of PFAS6 were reported is from one of two treatment plants that supplies drinking water to our system. PFAS6 levels were reported below the MCL at our other location (Memorial Beach Water Treatment Plant).

#### What does this mean?

**This is not an emergency. If it had been, you would have been notified immediately.** Although this is not an emergency, as a consumer of the water, you have a right to know what happened, what you should do, and what we did and are doing to correct this situation.

On October 2, 2020, Massachusetts Department of Environmental Protection (MassDEP) issued a new drinking water regulation setting a maximum contaminant level (MCL) of 20 nanograms per liter (ng/L) for the sum of six per- and polyfluoroalkyl substances (called PFAS6). PFAS6 includes perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorononanoic acid (PFNA), perfluorohexanesulfonic acid (PFHxS), perfluorodecanoic acid (PFDA) and perfluoroheptanoic acid (PFHpA).

PFAS are man-made chemicals that have been used in the manufacturing of certain fire-fighting foams, moisture and stain resistant products, and other industrial processes. An MCL is the maximum permissible level of a contaminant in water which is delivered to any user of a public water system. **Some people who drink water containing PFAS6 in excess of the MCL may experience certain adverse effects. These could include effects on the liver, blood, immune system, thyroid, and fetal development. These PFAS6 may also elevate the risk of certain cancers.** For more information on PFAS, see the links below.

## **What should I do?**

**For consumers in a sensitive subgroup** (pregnant or nursing women, infants, and people diagnosed by their health care provider to have a compromised immune system)

- **Consumers in a sensitive subgroup are advised not to consume, drink, or cook with water when the level of PFAS6 is above 20 ng/L.**
- **Consumers in a sensitive subgroup** are advised to use bottled water for drinking and cooking of foods that absorb water (like pasta).
- **For infant formula**, use bottled water or use formula that does not require adding water.
- **Bottled water should only be used if it has been tested.** The Massachusetts Department of Public Health requires companies licensed to sell or distribute bottled water or carbonated non-alcoholic beverages to test for PFAS. See <https://www.mass.gov/info-details/water-quality-standards-for-bottled-water-in-massachusetts#list-of-bottlers->

## **For all other consumers not in a sensitive subgroup**

- **If you are not in a sensitive subgroup**, you may continue to consume the water because 20 ng/L value is applicable to a lifetime consuming the water and shorter duration exposures present less risk.
- **If you have specific health concerns regarding your past exposure**, you should see the Centers for Disease Control and Prevention's (CDC) link below and consult a health professional, such as your doctor.

**Steps you can take to reduce your intake** - Consider taking the following steps while actions are being implemented to address this issue:

- **For older children and adults (not in a sensitive subgroup)**, the 20 ng/L value is applicable to a lifetime of consuming the water. For these groups, shorter duration exposures present less risk. However, if you are concerned about your exposure while steps are being taken to assess and lower the PFAS6 concentration in the drinking water, use of bottled water<sup>1</sup> will reduce your exposure.
- **In most situations, the water can be safely used for washing foods, brushing teeth, bathing, and showering.**

**Please note: Boiling the water will not destroy PFAS6** and will somewhat increase its level due to evaporation of some of the water.

## **What is being done?**

Our water system has taken the following pro-active measures:

- Bigelow Road Well has been removed from service.
- We are investigating treatment options.
- When additional information becomes available, this public notice will be updated.

## **Where can I get more information?**

For more information, please contact Webster Water Department at 508-949-3861, or visit our website at:
